Code	Title Probability & Statistics	Credits	The concent of probability and its proportion descriptive statistics di	Description
	for Scientists & Engineers	3	random sampling and sampling distributions, Hypothesis testing. Prerec	crete and continuous random variables, expected value, distribution functions, the central limit theorem, quisite: MATH 170 ering professionals. It reviews the project management framework in organizations and covers in-depth the
IENG300	Engineering Project Management	3	tools and techniques used in initiating, planning, executing, monitoring engineering project examples are used to demonstrate the applicat Management Institute[]s (PMI[]s) Project Management Body of Knowled	, controlling and concluding a project to achieve the set goals within schedule and budget targets. Real life tion of project management concepts to engineering projects. The course is aligned with the Project ge (PMBOK) and helps learners to prepare for PMI certification exams. Prerequisites: ENGL201.
MATH210	Calculus II	3	Taylor and Maclaurin series and application of power series. The mat Prerequisites: MATH160	and their derivatives integration techniques, improper integrals, sequences, infinite series, power series, hematical software Maple will be introduced and used in support of the comprehension of the material. is for the design and analysis of many types of structural, mechanical, electrical devices encountered in
	Mechanics I (Statics)	3	engineering. As the course name suggests, this course deals with the provides the students with the principles that treats the Statics of part ENGL051. Co-requisites: MATH210.	equilibrium of bodies that are either at rest_move with constant velocity. Therefore, this Statics course icles and rigid bodies, trusses, frames, machines; centroids, centers of gravity; and friction. Prerequisites:
MENG225	Engineering Drawing & CAD			ol in order to generate accurate drawings due to scales in 2 D and in 3 D. It focuses on drawings related to ol,_they may represent the first step of design (Design of tools and machines).
EENG250	Electric Circuits I	3		on, & Source Transformation) containing ideal and dependent sources. Covers real power calculations, I Norton equivalent circuits, basic concept of mutual inductance, and determine the transient responses of MATH210
CSCI250	Introduction to Programming		This course introduces the basic concepts and principles of structured in Java then teaches simple data types, control structures, methods, arr	programming in Java. It starts by an introduction to Java showing its syntax and the structure of a program avs, and strings.
CSCI250L	Introduction to Programming Lab	1	This course is a co-requisite for the Introduction to Programming cour	se (CSCI250). The students apply in the lab the fundamentals of programming, explained in CSCI250, by ning problems using basic data types, selection and repetition structures, methods and arrays.
MATH220		3	This text covers basic topics on infinite series, lines and planes in spac chain rule, directional derivatives, Gradient vector, tangent planes, do	e, cylinders and quadric surfaces, functions of several variables, limits and continuity, Partial derivatives, uble and triple integrals, areas, moments, center of mass, volumes, double integrals in polar forms, triple or fields Green∏s theorem, surface integrals, Stokes theorem, and the divergence theorem. Students are
	Linear Algebra with Applications	3	Introduction to the systems of linear equations and matrices, Gaussian	n eliminations, matrix operations, inverses, types of matrices, determinants and their applications, vector nullity, inner product spaces and orthogonal bases, eigenvalues and eigenvectors, applications from other
MATH270	Ordinary Differential Equations	2	First-order equations, linear and non-linear differential, linearization, n	umerical and qualitative analysis, second-order equations, existence-uniqueness theorem, series solutions, rential equations, applications and modeling of real phenomena. Prerequisite: MATH 220.
PHYS220	Physics for Engineers			rential equations, applications and modeling of real phenomena. Frerequisite: MATH 220. rat Law, Ampere[]s Law, Faraday[]s Law, Fluid Mechanics, Wave Motion, Sound Waves, Superposition and
	Major Requirements	_		
Code	Title	Credits		Description problems encountered in surveying engineering. As the course deals the earth (earth and universe, earth
SURV305	Surveying I	3	mathematical review (function, derivative, differential of a function), a error for indirect measurements, measurements of different measurements). Distance measurements (definitions and types, direct	sying and mapping (introduction, classical ground surveys, aerial surveys, and global position system), theory of error (statistics and probabilities, types of error accidental errors and calculations, accidental reliability. Angular measurements and instruments (definitions, instruments errors of angular measurements. behavior of systematic error in direct measurements methods and equipments for indirect linstruments (definitions, methods of leveling), execution of surveying works (basic net work, calculation
SURV305L	Surveying Practice I Lab	1	study, theory and field methods of route and topographic surveying, I	ncepts relating to the measurement of land and the use of maps and site plans A practical application of the introduction to using chaining, stadia, leveling, transit. The objective of this lab is to orient the student to and their applications, compare the relative accuracy of different techniques, and learn the principles of n. reduction, analysis, and presentation.
SURV315	Geology	3	This course is designed for the Survey engineering students (non-scier twenty five chapters. The first part starts with defining geology and it to the earth core and will be introduced to the Plate tectonic the sedimentary). Part three will deal more about earth dynamics (volcan of the Earth and the ways and methods for dating the rock age. While the Earth[]s Surface, students would be exposed to the notion and pr	ice students) to understand the Earth processes and phenomena. This course is designed in eight parts and sprincipal branches. It deals with cosmology; the origin of earth and planets. Students will make a journey ry. In the second part students will learn about different types of Rocks (metamorphic, igneous and sm, earthquakes, and mountains building). The fourth part would be dedicated for studying the biography part five is about earth resources (Energy & Mineral). Part six will handle the Processes and Problems at occesses of mass movements, the geology of running water, oceans and coast, groundwater, atmosphere, h the art of making and reading geological maps in addition to performing the stratigraphical column and
SURV325	Cartography	3	Basic concepts of cartography, geographical maps, types and proprieti	es, cartographical expression and representation, map realization, earth surface, earth representation.
SURV335	Surveying Drawing & CAD	3	plotting. Surveys of existing buildings. Contouring, leveling, location of	
SURV355L	Surveying Practice II Lab	1	horizontal and vertical angles and distances used in traversing, accor-	onic distance measurement, total station), techniques and hardware of the profession necessary to measure ding to prevailing and applicable professional standards. Study of the measurement and determination of uses. Instruction in a variety of adjustment methods using programmed and non-programmed hand-held
SURV355	Surveying II	3	representation, properties of conform representation. Mapping proce	s. Introduction about geodesy. Ellipsoid and Geoids. Mapping of earth surface. Properties of plane idures used in topography. Surveying instruments. Determination of surveying points net work (azimuth, ruments. Surveying of details (side shots-abscissa and ordinates, lateral oblique). Representation of relief as sections- earth world).
SURV365	Geodesy I Computer Aided	3		ordinates. Approximating the natural system. The geoids, the ellipsoid, basic surface geometry.
SURV385	Drafting for Surveyors	3	Softdesk introduction, DTM settings, surface, site, contour, section, DT	-
SURV375	Topometric Calculus I	3	General concepts on topometrical calculus- resolution of triangles, points Summer training for field surveying application. Determination of su	rveying points net work (azimuth, surveying intersection, three points problem, and traverse). Leveling
	Surveying application I	3	cross sections- earth world). Introduction to photorammetry, introduction the photographic ne	steral oblique). Representation of relief (Methods used, construction of contour lines). Longitudinal profile- gative and its optical and chemical elements, the relief constitution, aerial photography, analogical
	Photogrammetry Cadastral Surveying and	3	aerial and satellite imagery, the rope of features in photogrammetric o Cadastral surveying refers to those surveys involving the definition of	land boundaries and requires a thorough knowledge of the current system for the registration of land. The
SURV414 SURV425	Construction LAW Topometric Calculus II	3	underlying principles as early as possible. Polygonal development, Straight line and curve problems, acreage, sur	
SURV435	Theory of Measurement Errors	3	weighted measurement, and weights by repeated measurements, adjlinearization, reanalysis of survey in measurements, applications in pla	cs, notions of probability, precision and accuracy, relative precision, accuracy ratio, least square method, istment of net work and level net work. Concepts of measurement and error, error propagation and error ne coordinate surveys, adjustment of several geodetic net works. cs, engineering and location conditions in net works. Geodesy cal triangles, triangles scales. The geometry
SURV445	Geodesy II	3	of spheroid, geodesic lines. First and second fundamental problems sp	
SURV455	Geographic Information Systems I	3	1	ring data, coordinate system, and data analyses. Coordinate projection, geo-referencing.
SURV465	Spatial Geodesy (GPS I)	3		ervables, the DOP factors, errors in GPS, the direct and reverse problems, satellite signal structure. Sions with knowledge of planning principles and practice, and the major planning issues confronting urban
SURV474	Urban Planning and Land Subdivision	3	societies at the beginning of the 21st century. The course begins with a study of the evolution of urban and regional planning theory and practice, with an emphasis on urban design. This is followed by a review of current planning processes as they are applied at capital, regional and local areas in Lebanon. The course concludes with a discussion of the major urban planning and design issues that will need to be resolved in the coming years. This project is a requirement for graduation with the B.S. in Engineering degree. Proposed by the supervising faculty, projects are geared towards integrating several topics	
	Senior Project	3	covered in the curriculum. Students will have the opportunity to exe teams; each team agrees on a project with the supervisor. The projec demonstration, a presentation and a technical report all of which are a	rcise research, experimentation, implementation and technical writing skills. Students typically work in t scope must be adjusted to match at least a 3 credit load per team member. The project concludes with a
